

# Train your teams. Build resilience.

Train your teams against modern security threats with relevant, threat-informed, and custom content.

## How Security Awareness Training Works

Doppel Security Awareness Training offers tailored, engaging training and personalized coaching based on role, behavior, or company-specific scenarios to help build employees' defenses against evolving AI-driven and multi-channel threats.

### Threat-informed Training

Relevant and specific training content tailored to every role, tech stack, compliance requirement, or sector, and based on actual threats detected by Doppel.

### Deepfake-driven, Custom Content

Create deepfake-driven training content specific to your company, and featuring your executives, branding, and tech stack.

### Automated Training Flows

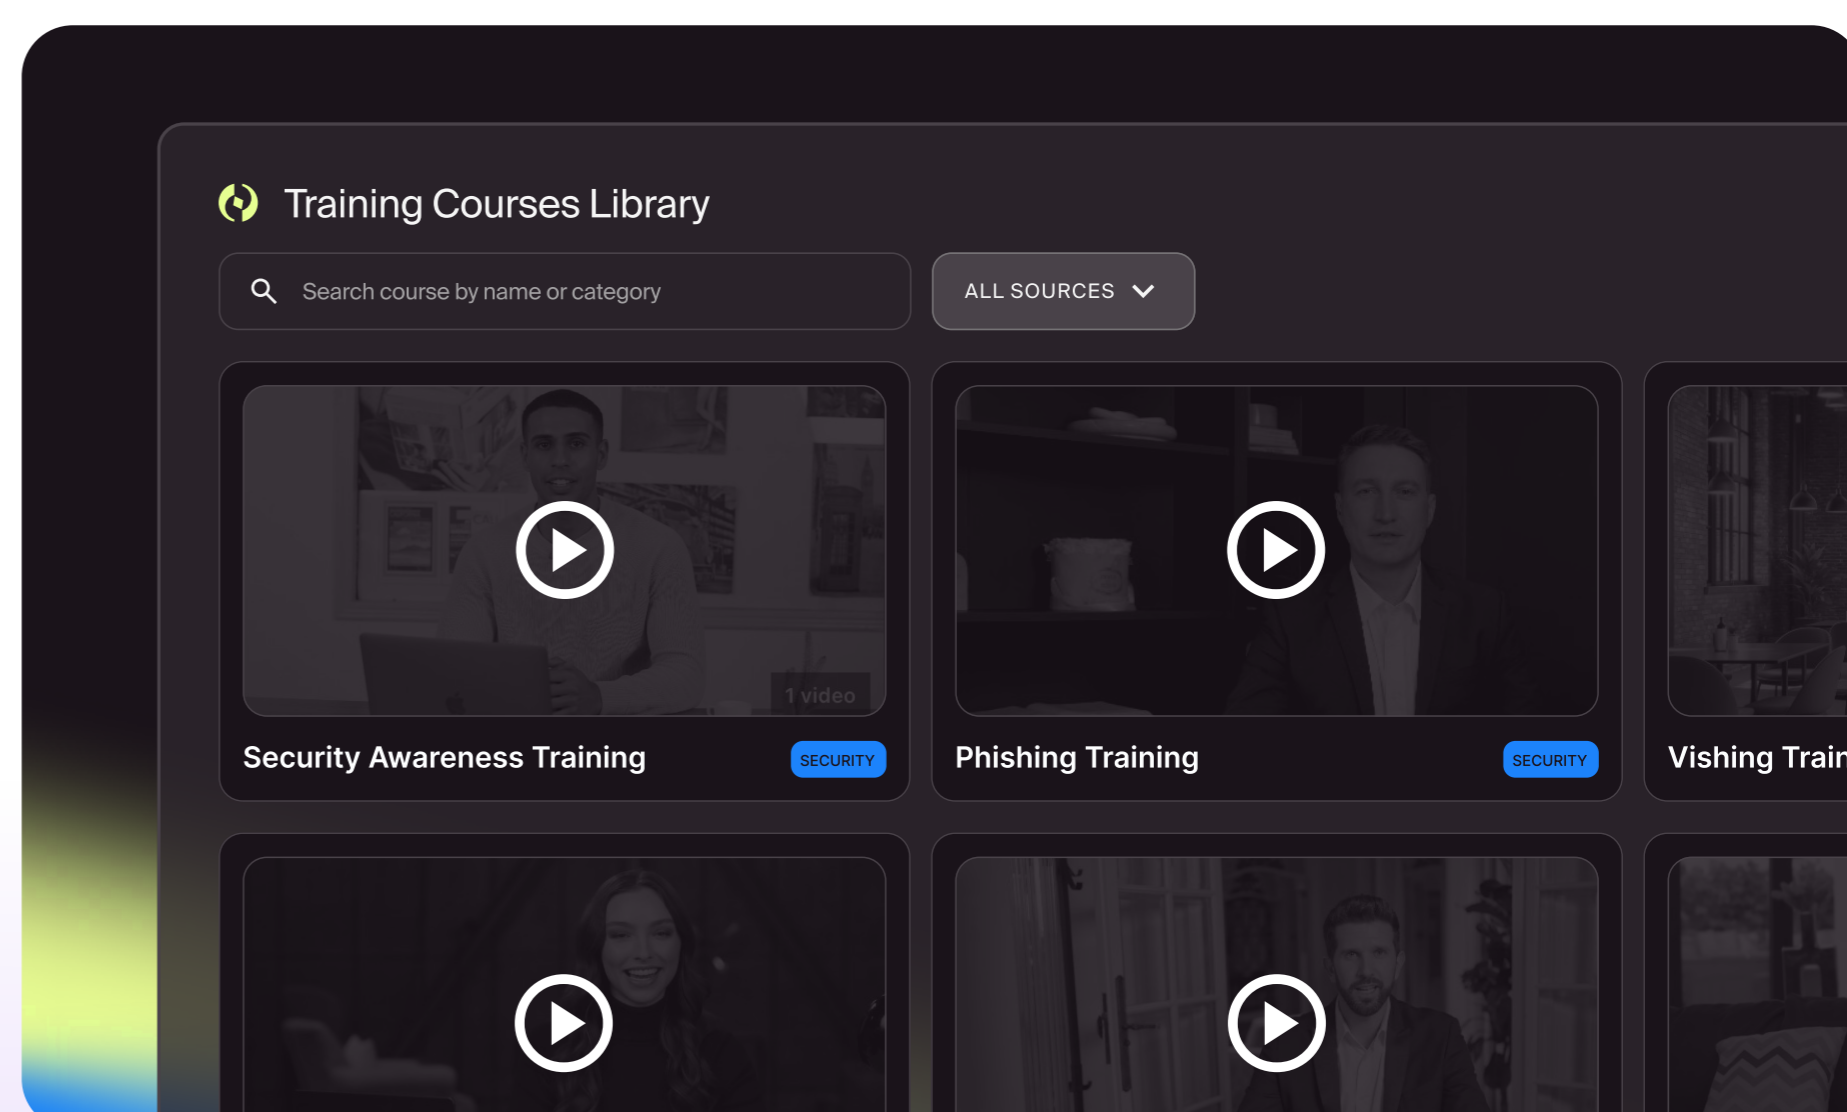

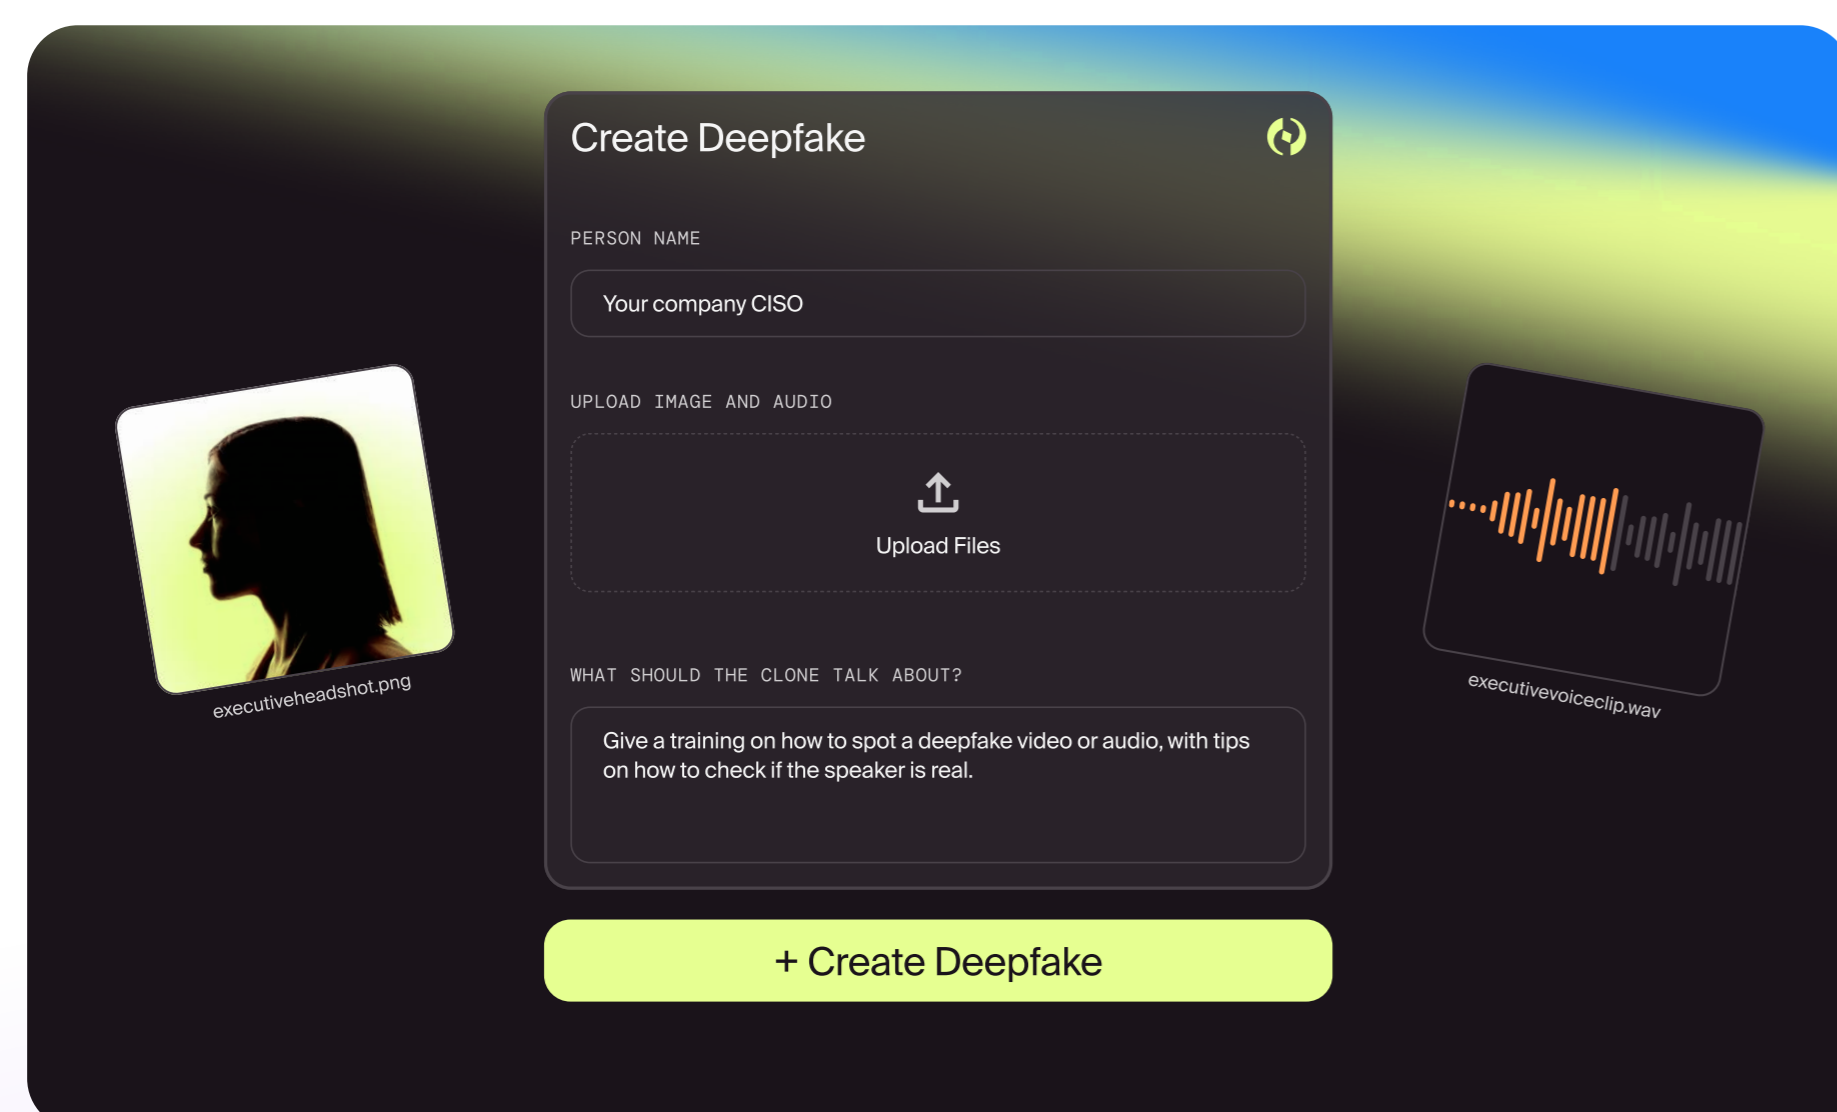

Configure training and simulations that can be sent to new hires as soon as they're added into the system.

### Personalized, Interactive Coaching

Shape behavior with real-time feedback and by allowing users to engage directly with training content, turning awareness into fun and impactful learning opportunities that boost retention.

## Why Doppel Security Awareness Training

- ✓ Increase employee vigilance against the most sophisticated attacker tactics
- ✓ Link simulation and training content directly to detections, testing defenses against actual attacks.
- ✓ Focus training and remediation efforts where they deliver the highest business impact
- ✓ Demonstrate alignment with security policies, compliance standards, and audit frameworks

Trusted by

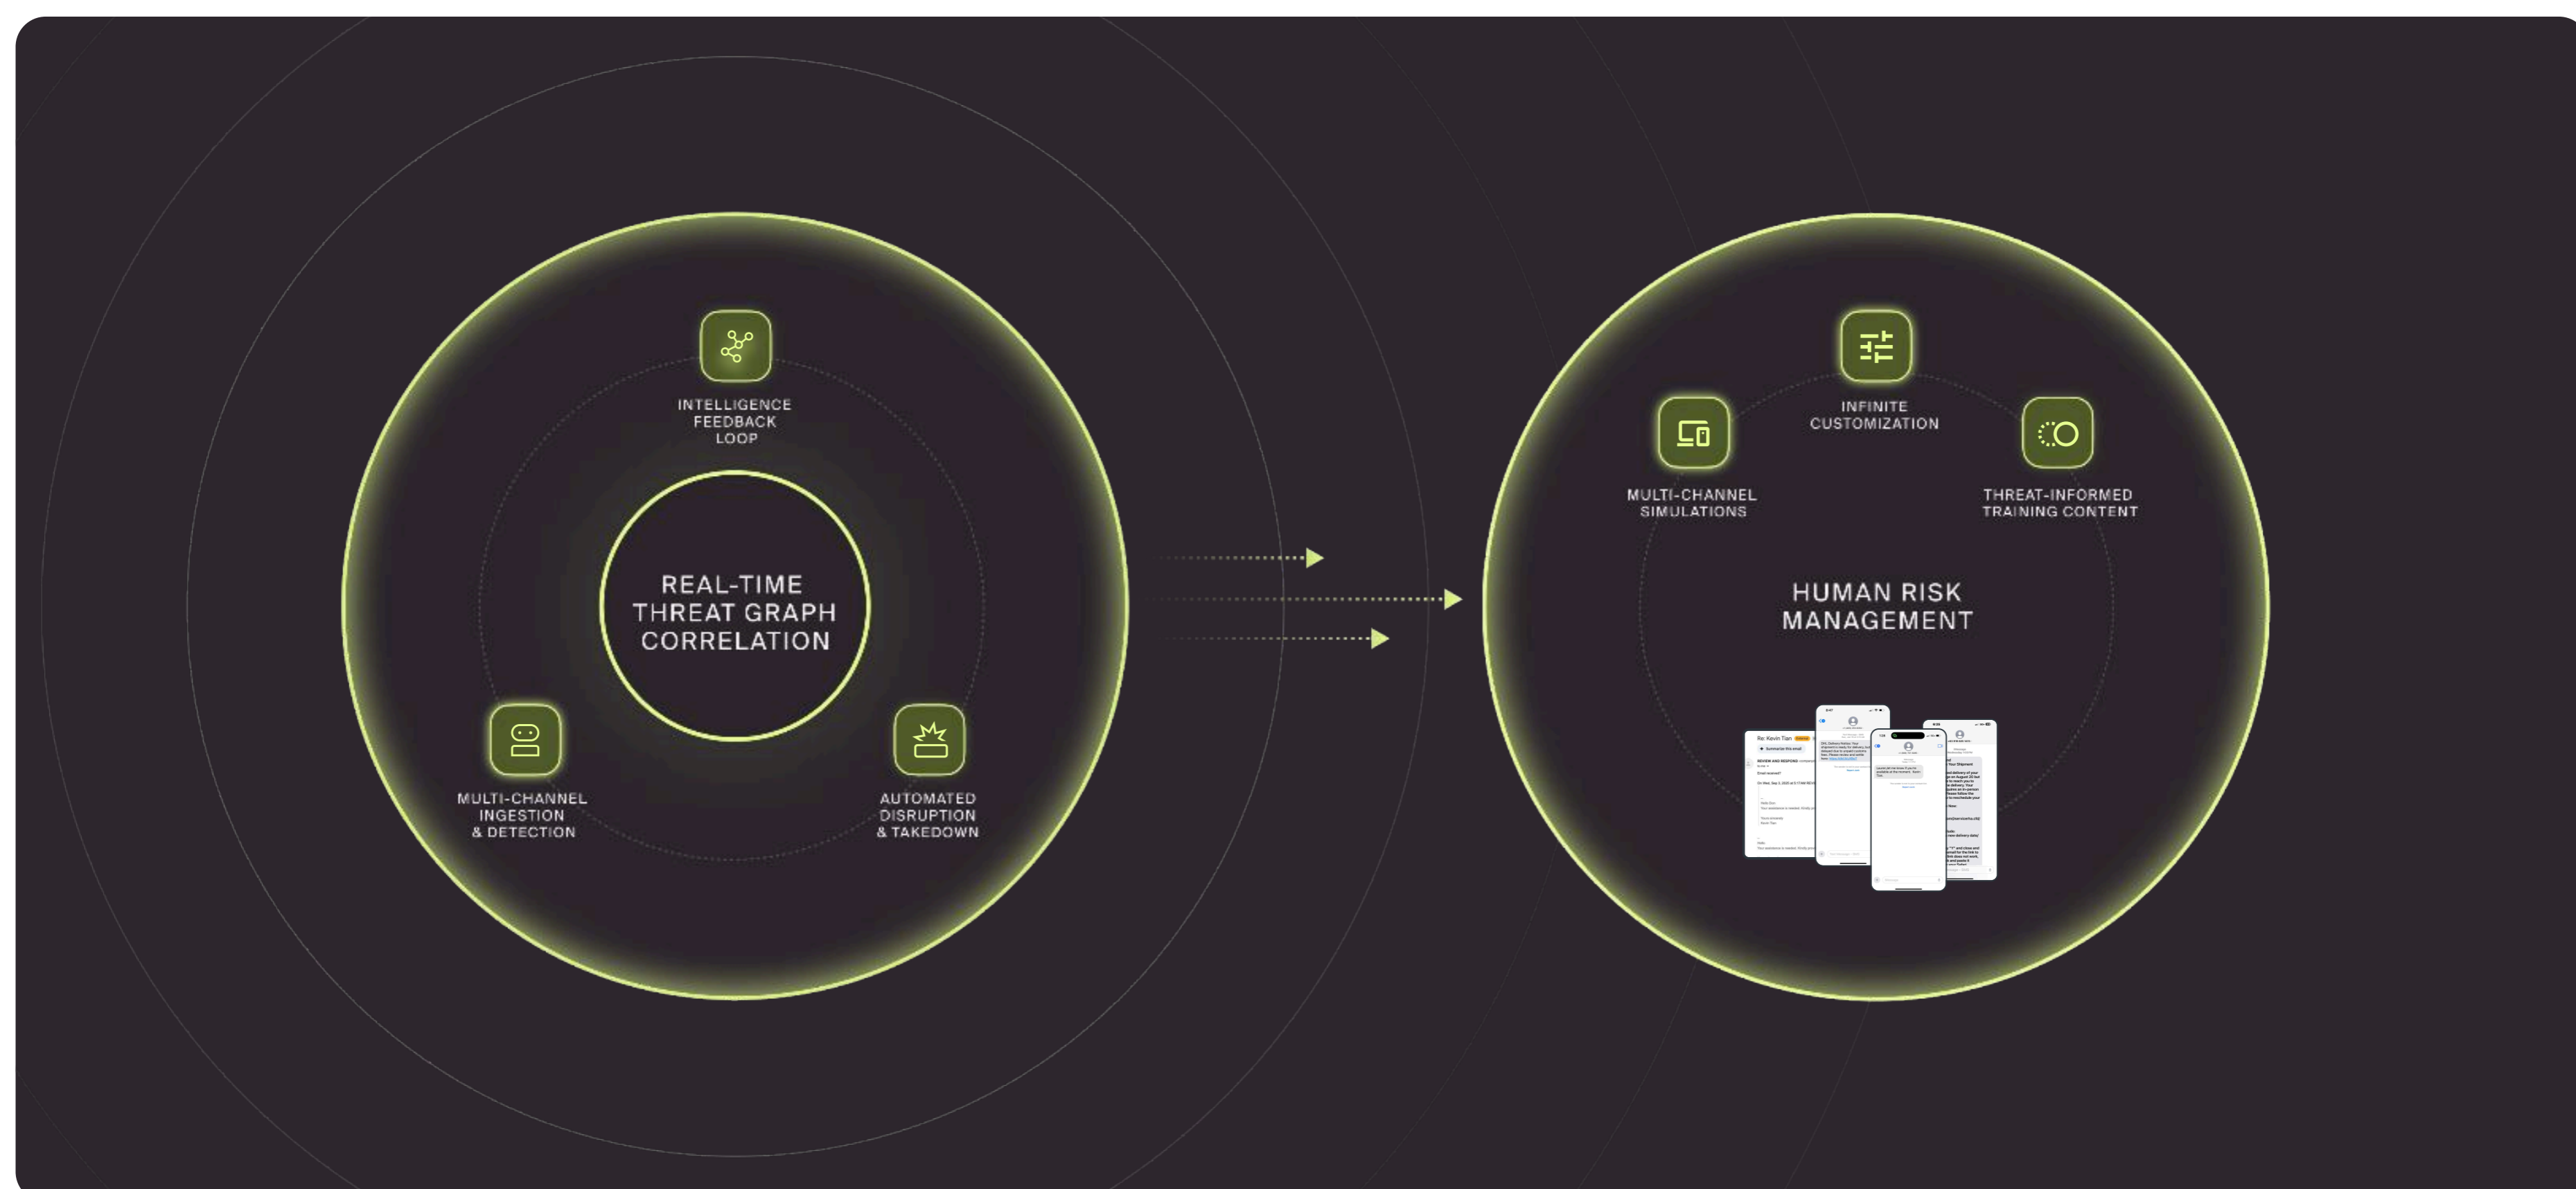

# The Doppel Platform

Graph-driven defense, multi-channel protection, and agentic AI.

We connect the dots between attacker infrastructure, TTPs, and active campaigns – building a threat graph that informs simulations and training content.

The Result:

- ✓ Hyper-realistic simulations
- ✓ Threat-informed training content
- ✓ Measurably stronger defenses

Doppel helps expose and eliminate blind spots with insights that harden defenses and elevate readiness for real-world social engineering attacks. We help organizations meaningfully reduce human risk through simulation and next-generation security awareness training.

- ✓ Multi-channel, hyper-personalized phishing simulations
- ✓ Dynamic risk modeling for insight into high risk users
- ✓ Deepfake-driven, tailored training content
- ✓ Threat-informed simulation and training to protect against the latest attacker tactics
