

End-to-End Security for Leaders & VIPs

Prevent executive impersonation, data exposure, and targeted fraud.

Why Doppel Executive Protection

Today's executives are among the most valuable targets for threat actors. Their public presence, decision-making authority, and digital footprint make them frequent targets for impersonation, fraud, social engineering, doxxing, and other attacks designed to compromise organizations through their leadership. Doppel Executive Protection helps organizations proactively reduce risk by identifying threats early and removing malicious infrastructure at scale.

- ✓ Safeguard high-profile leaders from digital, reputational, and physical threats
- ✓ Reduce legal, financial, and reputational exposure tied to executive-targeted attacks
- ✓ Prevent executive impersonation from being weaponized for fraud and infiltration
- ✓ Disrupt executive-targeted attack operations at the infrastructure level with automated takedowns

MONITORING AND RESPONSE

How Executive Protection Works

Doppel Executive Protection uses agentic AI to detect, correlate, and disrupt threats targeting high-profile individuals. From impersonation campaigns to exposed personal information and physical threats, Doppel uncovers attacker activity across social platforms, messaging channels, domains, paid ads, dark web, and data broker sites, then dismantles the attacker infrastructure behind it.

Threat Graph Campaign Correlation

Agents map and link adversary activity across messaging channels, social media, domains, dark web, and more within a centralized threat graph to reveal the underlying infrastructure and coordinated campaigns.

PII & Credential Monitoring

Detects and removes exposed personal information, credentials, and sensitive data that can increase executive risk and enable targeted attacks.

Physical Security Intelligence

Detects physical threat signals tied to executive safety, including pre-event and real-time coverage, helping teams assess and escalate potential real-world risk.

Automated Enforcement

Disrupts full attacker infrastructure through coordinated takedowns across domains, social platforms, telecom providers, ad networks, and other channels to dismantle the full campaign.

The Doppel Platform

Graph-driven defense, multi-channel protection, and agentic AI

By linking activity across channels, infrastructure, and attacker behaviors, Doppel uncovers coordinated campaigns and dismantles the full attacker operation — not just individual threats.

The result:

- ✓ Complete threat campaign visibility
- ✓ Infrastructure-level disruption
- ✓ Proactive reduction of executive risk

Doppel protects executives from AI-powered impersonation, fraud, and social engineering. We continuously uncover relationships between threats, infrastructure, and attacker activity to expose coordinated campaigns and dismantle the operations behind them.

- ✓ Agentic AI continuously investigates threats, validates findings, and prioritizes risk
- ✓ Automated enforcement orchestrates takedowns across registrars, telecom, ad networks, and social platforms
- ✓ Real-time threat graph correlates attacker infrastructure, behaviors, and campaigns across channels
- ✓ Feedback loops from every investigation continuously improve detection, correlation, and disruption
